# Technical Plan Review™

Detailed. Valuable. Efficient.

Our own team of expert and experienced professional engineers, master code professionals and certified plan examiners identify code and design deficiencies. Their detailed comments on non-compliant items and alternate design options help improve constructability, minimize liability, eliminate costly errors and can even expedite the building department's plan review process.

Quality Built supports designers, owners and financially interested parties in developing safe, constructible and efficient buildings that comply with all applicable building codes. QB's typical plan review involves:

- » "Hot Spot" Systems Review
- » Building Code Compliance Review
- » Vertical Alignment Checks
- » Constructability Reviews
- » Design Details and/or Specifications Reviews
- » Dimensions Review
- » Applicability of Systems, Equipment, Materials and Finishes Review

Quality Built's Plan Reviewers also look at constructability, best practices and established trade standards. Our primary focus is to provide valuable feedback on systems that have the potential to create problems for builders during construction and at turnover.
