

20/20 Foresight

Quality Built's Technical Plan Review helps designers, builders, developers, and financially-interested parties identify potential obstacles – and opportunities – before they arise.

BIG PICTURE & SMALL DETAILS

Every construction project is complex, with hundreds, if not thousands, of variables and dependencies. An integral part of any risk management program, a Technical Plan Review will uncover potential errors, omissions, ambiguities, and conflicts – improving constructability and minimizing liability.

Just as importantly, our team will pinpoint potential opportunities for improvement, providing vital information on non-compliant items, manufacturer's specifications, and industry best practices.

SMART & CERTIFIED

Quality Built's Technical Plan Review is conducted by a multidisciplinary team of licensed engineers, architects, and code compliance specialists. With decades of experience in building science, materials, and quality assurance, these professionals know all the requisite code requirements and the realities of the job site.

Our focus? To deliver valuable feedback on systems that have the potential to create problems for builders during construction and at turnover.

Our expert team of Technical Service Specialists will build a comprehensive report of findings and recommendations.

**PREVENT ERRORS,
DELAYS & OVERRUNS**

IDENTIFY & DOCUMENT RISK

**BENCHMARK AGAINST BEST
PRACTICES & TRADE STANDARDS**

**EXPEDITE BUILDING
DEPARTMENT PLAN REVIEW**

**ANALYZE DESIGN &
ENGINEERING ALTERNATIVES**

TECHNICAL PLAN REVIEW INCLUDES...

- ◆ "Hot spot" systems
- ◆ Building code compliance
- ◆ Constructability
- ◆ Design details and/or specifications
- ◆ Dimensions
